To: ham-equip@ucsd.edu

I have the following items in my collection, that I was going to get it
working and use it as CW transmitter, then again I'm thinking about
selling it and buy something that I can plug and play.

So..my question to you all is how much are they worth. They were made by
Bendix Radio for Navy Department with contract dated 20 May, 1940.

 Aircraft Radio Transmitter, Model ATD
 Made by Bendix Radio, Baltimore, MD
 Type CRR-52253

ATD tuning unit Type CRR-47208,47209,47210(2 units).

Original instruction book

Please e-mail, Thanks in advance.

I have been very happy with my FT-411E. It has performed flawlessly. It is a great solid small unit. My only gripe is that it doesn't have a keyboard protector like the Kenwoods. I have to keep it in its case which makes it kind of hard to press the keys(you do it through the transparent plastic).

It also works great on the public service bands.(receive-only, of course).

HP>Do you have an Icom R1 or have knowledge about it?

HP>What do you think of this radio? What have you heard about it?

The R1 stinks, I own one, Im sorry I own one.

Selectivity, none.

Intermod, aplenty.

No channel banks, just 100 contiguous.

But it is very small, has good audio. But Icom should have done better.

Okay, when someone said that they'd offer a 100 watt HF rig for \$300, I
thought "Yowser!"... BUT, it's possible I suppose...

However, a 20-amp power supply for \$20!?!?!?!?!

No way.

Please note that I'm not ragging on you, just the prices and wherever the
rumor started... Amazing.

I wouldn't mind seeing Radio Shack do an HF rig, though, as long as it's
not marketed as a multi-band CB like some fear...

Yeah, the power supply will be \$9.95, not \$19.95...

hell.... i can use the coupon in the catalog this year and get good deal on this! ;-)

but the 20a supply for \$19.99??? i don't think so. they sell supplies now for more than that unless it's going to be a recycled die hard! ;-)
